

## TJ Krusinski

I am a problem solver, I focus on building and designing Node.js applications. I care for the local community I am part of by leading meet ups and teaching new technologies to local developers. I have founded 3 software companies and lead a Node.js meet up in Orlando, FL. I also am a live, multi-camera video director and previously have been an analog photographer.

## Work

**Stream Monkey** | streammonkey.com

May 2011 - February 2012

Stream Monkey is a live online video platform. I co-founded Stream Monkey with the intent to create a product that is simple to integrate yet meets customers needs with analytics and cross platform support. Stream Monkey is lowest cost, most featured online video platform for house of worship market available. I was pivotal in the original product development, contributed to the video streaming architecture and designed and built the first web application for customers to manage and view analytics on their content. Stream Monkey has gone on to double revenues year over year.

**Shoflo** | shoflo.tv

September 2011 - March 2014

Shoflo is a real-time project management tool for live events. I co-founded Shoflo out of the need to formalize live event planning and execution. Targeting the corporate production industry, Shoflo is a tool to centralize information into a real-time communication channel for production staff and technicians. Being part of the corporate product industry as a video director, I felt first hand the need for a tool of it's kind. I was key in the product development and system architecture that makes up Shoflo. 6 discrete Node.js services create the real-time infrastructure that enables edge web servers to be placed in remote locations to remove the dependency of an internet connection and cache content for the event. Shoflo was invited to be part of the first tech business accelerator in Orlando as part of the Start Studio program created by Envy Labs.

## Freelance

January 2010 - Present

**Wondermade** | wondermade.com

Built the initial website, including cart and payment system in Node.js

**Northland Church** | northlandchurch.net

Assisted with the construction of a new site, including a real-time worship environment to engage their online congregation.

**Real Thread** | realthread.com

Design the achitecture behind the site. Real Thread creates high end custom screen printed apparel. The architecture includes a large Salesforce integration.

**Code School** | codeschool.com

Currently helping Code School develop a new Node.js course. We also just finished updating their existing, Real Time Web With Node.js course.

**Mobiquity** | mobiquityinc.com

In Februrary 2014 I lead 9 staff developers through a month long full stack web application development training program. We covered modern Front End development tools, Node.js, testing, NoSQL databases and other tools.

## Education

I have an associates degree in Recording Engineering (Audio) from Full Sail University

May 2011
